Feeding the World

Using

Nanotechnology

Instructor: Dr. Ilise Feitshans

One-week class

Widener Campus

Tuesday, May 19

1 PM

Registration \$10

Everyone eats, which means food is shaped by national, international, religious, and regional trade laws. This lecture explores how nanotechnology is changing crops, harvesting, storage, packaging, transport, marketing, drug delivery using food, and efforts to reduce food waste. Participants will consider the promise and legal questions surrounding nanotechnology as a tool for addressing food insecurity.
